

## Touch free air freshener

Hygienic, economical and all-automatic.

This touch free air freshener, co-developed by Venoplas and ulticom, is an „**innovation made in Germany**“.

We have collected many years of experience to develop a product which sets new standards that include economic use and user-friendliness.

The Venoplas air freshener releases through all-automatic spray and therefore without direct contact. The user does not come into contact with surfaces, which have already been touched by other users. This means that permanent hygiene is ensured.

The air freshener sets standards that include economic use. A 100 ml aerosol lasts for 3.000 sprays. The amount of maintenance is very low. The battery consumption is also very low because day of rests are adjustable. The operating time is eligible between 8 and 24 hours.

Thanks to the large LCD display the handling and the programming of the Venoplas air freshener are easy and comfortable. The amount of the consumables is seen through the display.

You can choose between 5 different aerosols – just as you wish and according to your taste (floral, citrus, mystique, cool, herbal fern). The aerosols can be replaced quickly and easily.

The installation is very simple: The various recesses of the casing make it possible to use any pre-existing mounting hole. A strong metal lock at the back of the casing protects the material from unauthorized access.

### Venoplas air fresheners are ...

#### hygienic

- the air freshener releases through all-automatic spray without direct contact

#### practical

- the various recesses of the casing make it possible to use any pre-existing mounting hole
- amount of the consumables is seen through the display
