

Motion sensitive soap dispenser

Hygienic, economical, functional and practical.

This motion sensitive soap dispenser, co-developed by **Venoplas** and **ulticom**, is an **innovation made in Germany**.

We have collected many years of experience and innovative detailed knowledge to develop a product which sets new standards that include hygiene, economic use, environmental compatibility and functionality. At the same time our dispensers offer the greatest possible comfort regarding handling and maintenance.

The motion sensitive soap dispenser has a new and self-calibrating sensor system which works reliably and prevents accidental set-offs.

The quantity of soap for each use is easily measured into exact doses (1.0 ml min.). A set of batteries lasts for at least 200,000 portions (that are 184 bags of soap).

The pump system in the Venoplas soap dispensers guarantees exact soap doses. This does not depend on the condition of the battery charge. Together with our special soap bags, it is an airtight system. Drying up and microbial contamination are avoided. The dispenser does not drip or leak.

All soaps are delivered in an airtight bag-pump-system. Even a half-full bag of soap is easily removed from the dispenser without dripping or coming into contact with air or germs in the air.

Also mounting is very easy. The various recesses at the back of the casing make it possible to use any pre-existing mounting hole.

Venoplas soap dispensers are...

hygienic

- without direct contact
- no microbial contamination – because of the airtight system
- even a half-full bag of soap is easily removed from the dispenser without dripping or coming into contact with the air

economical

- accurate and constant dosage starting at 1.0 ml per pump
- a set of batteries lasts for at least 200,000 portions (184 bags of soap)

functional

- the dispenser is constantly self-calibrating (depending on the environment)
- exact doses independent of battery status
- bags can be taken out without microbial contamination of the soap

practical

- various mounting holes at the back of the casing ensure easy mounting
- easy to operate

Specifications

- electronic; without direct contact
- electronic; self-calibrating
- exact doses starting at 1.0 ml
- airtight bag-pump-system
- leak proof, no drops
- easy to operate
- battery operation
- 200,000 portions/set of batteries
- indication window/metal lock
- wall mounting
- height x width x depth:
280 x 105 x 108 mm
- in the following colours:
high-grade steel design
white

The Venoplas soap dispensers are available in the following colours:

high-grade steel design
