

## Toilet paper dispenser

Hygienic, economical, environmentally-friendly and practical.

Similarly to all Venoplas products economic use, hygiene and easy handling during installation and maintenance have been the focal point of the development of our toilet paper dispenser.

Rest roles with a small quantity of paper can remain in the dispenser. The toilet paper is used until the last leaf. This saves costs and reduces the maintenance expenses when you refill the consumables.

The consumable is easily being checked through the indication window. The toilet paper is quickly and uncomplicated replaced. The very high filling capacity reduces the maintenance expenses.

The casing is manufactured from high quality abs-plastic. That guarantees a simple and hygienic cleaning. Also here the installation is very simple. The various recesses of the casing make it possible to use any pre-existing mounting hole.

A strong metal lock protects the material from unauthorized access.

### Venoplas toilet paper dispensers are ...

#### hygienic

- simple cleaning because of the high quality abs-plastic

#### practical

- simple installation because of the various recesses of the casing
- consumable is being checked through the indication window
- easy operation

#### economical

- rest roles remain in the dispenser – toilet paper is used until the last leaf
